

06 — HERO CORRECTION DIRECTIVE

For Claude Code (Fable 5) · 2026-07-10 · read FIRST, before any other work this session

The first hero build was reviewed by the owner and **rejected**. This directive is the complete, ordered fix list. Do not start new scenes until every item here passes its acceptance check. Updated companion docs: 01_CREATIVE_DIRECTION.md v2.1 (rewritten Scene 01, new §1.5 Ink Layer + §1.6 Atmosphere) and 05_WEBSITE_BUILD_SPEC.md v2.1 (new §3.5 Rendering Environment Contract).

What the review found (the screenshot, diagnosed)

#	Defect	Root cause
1	Product renders flat, grey, lifeless	No lighting: no environment map, no key light, default tone mapping
2	Fur looks like camouflage (mottled black/grey patches)	Unlit MASK fur cards + probable colorSpace error + the cream <i>tripo</i> bake bleeding through ribbons (known issue, README item #6)
3	Desk is a small plank floating <i>behind</i> the basket; no clamp visible ; product not attached to anything	Desk/product not positioned per the placement guarantees; camera pose never calibrated against HF-P01
4	Headline collides with the render	No composition contract between DOM column and 3D pose
5	Page reads empty and cold — “Nike, not a cat product”	No grain, no light gradient, no shadow, no warmth, zero charm elements — dead whitespace

The fix, in order (each step has a check — screenshot after each)

1. **Install the rendering rig** — Build Spec §3.5.1–2 verbatim: studio Environment (intensity

~0.55), warm key light upper-left with soft shadows, fill, ACESFilmic + sRGB output, ContactShadows under clamp and basket. ✓ Check: materials show depth and warmth; product no longer looks like unlit clay; both shadows visible.

2. **Fix texture colorSpaces**, then run the **fur decision tree** (§3.5.6 a→d) and stop at the first level where the plush reads as soft uniform grey fur at hero distance. ✓ Check: zero camouflage mottling at DPR 1.5; state which tree level you stopped at in the review note.
3. **Dock the product** — product at origin, desk top face meeting the top plate, clamp gripping the edge, per §2 placement guarantees. The desk is an anchored plane entering from the right viewport edge (frustum-cropped), NOT a floating slab. ✓ Check: an uninformed viewer can tell in one second that this object clamps onto a desk.
4. **Calibrate the hero camera** against `HF-P01` (50%-opacity overlay method, §3.5.3). The clamp — bracket, screw, star knob — must be fully legible. ✓ Check: side-by-side PNG, silhouette within ~10%.
5. **Enforce the composition contract** — text column $\leq 46vw$, basket left extent $\geq 48vw$ at all breakpoints $\geq 1024px$; stacked layout below 1024px. ✓ Check: no overlap at 1024/1280/1440/1920.
6. **Install the atmosphere layer** (creative direction §1.6): warm radial light-pool gradient on the bone field (upper-left, $\approx +3\%$ luminance), and the 3% film-grain overlay actually rendering. ✓ Check: toggling grain + gradient off/on in devtools visibly changes the mood; with them on, the frame feels like the photo library.
7. **Add the two hero ink touches** (creative direction §1.5 + copy deck): the hand-drawn underline beneath “close” (stroke-draws once, 600ms) and the handwritten annotation “*hand-tight — no tools*” with a curved arrow to the star knob (1.2s delay). Implement as SVG paths with stroke-dashoffset draw; if no suitable handwriting font is licensed, draw the words as paths. ✓ Check: both animate once, read instantly, and would survive being shown to a design director.
8. **Add the mono spec strip** bottom-left: `HOLDS 22 KG · FITS EDGES 20-75 MM · WASHABLE`. ✓ Check: fills the dead corner without competing with the CTA.

Final acceptance (all must hold before new scene work)

- Side-by-side PNG: hero canvas vs `HF-P01`, same crop — submitted for owner review
- One-second comprehension: clamp-to-desk relationship obvious
- Fur: uniform soft grey, decision-tree level documented

- No text/render overlap at any breakpoint; grain + gradient + both shadows present
- Both ink touches in, nothing else added — the budget in §1.5 is a hard cap
- Warmth test: screenshot next to the rejected build — a stranger should pick the new one as “the expensive cat brand” without being told which is which

What NOT to do

Do not add more objects, colors, badges, or effects to fill space — the emptiness was missing *light, shadow, grain and one ink voice*, not missing stuff. Do not touch the fur material’s MASK/transparent settings. Do not redesign the layout grid. Do not proceed to Scene 02+ polish until the owner approves the hero side-by-side.
